(54) CACHE MEMORY SYSTEM, ESPECIALLY FOR PROVIDING THE CACHE MEMORY SYSTEM CAPABLE OF RENEWING THE CACHE MEMORY FOR A USER WITHOUT ADDING A SPECIAL HARDWARE**(57) Abstract:**

PURPOSE: A cache memory system is provided to reduce the size of a circuit and prevent the size increase of the hardware system, thereby freely setting the renewal time.

CONSTITUTION: A cache memory system comprising of a memory with a plurality of banks and a cache controller(2) transmitting the cache renewal order by an instruction of CPU(1) to a DMA(Direct memory access) controller(4) constitutes the followings: the DMA controller transmitting the data between the main memory(5) and the cache memory(3) according to the received order from the cache controller.
